(617) 599-8532 yangzhou@g.harvard.edu
yangzhou1997.github.io

RESEARCH INTERESTS

Networked systems, distributed systems, networking stacks, extensible kernels, network telemetry.

EDUCATION

Harvard University, Cambridge, MA

Ph.D. in Computer Science

(Expected) June 2024

M.S. in Computer Science

November 2021

Thesis: Co-Designing Networking Stack and μ s-Scale Applications for Efficiency and Performance

Advisors: Minlan Yu and James Mickens

Peking University, Beijing, China

B.S. in Computer Science

July 2018

Thesis: Towards Faster and More Accurate Data Stream Processing

Advisors: Tong Yang

WORK EXPERIENCE

Harvard University, Research Assistant

August 2018–Present

- *Extensible kernels*: Designed kernel offloads via eBPF for distributed system protocols including Paxos (Electrode [1]) and serializable transactions (DINT [12]). Implemented and evaluated offloads atop unmodified Linux OSes, and achieved kernel-bypass-like performance.
- *μ s-scale RPCs*: Designed an efficient inter-server load balancing scheme for μ s-scale RPCs to achieve low tail latency and high goodput (Mew [11]). Implemented and evaluated for both kernel-bypass and kernel-based networking stacks.
- *SmartNIC architecture*: Designed and prototyped SGX-like TEEs (Trusted Execution Environments) for NFs (Network Functions) in SmartNICs under multi-tenant cloud environments (NFSHield [13]).

Google NetInfra Group, System Research Group, Research Intern

June 2021–May 2023

- *Far memory*: Designed an efficient far memory system that leverages erasure-coding, remote memory compaction, one-sided RMAs, and offloadable parity calculations to achieve fast, storage-efficient fault tolerance (Carbink [2]). Implemented using production networking stack, and evaluated using production applications and workloads.
- *μ s-scale RPCs*: Identified and motivated the inter-server scheduling problem for μ s RPCs (leading to Mew after the end of internship).

VMware Research, Research Intern

July 2020–September 2020

- Applied traffic redundancy elimination (TRE) technique to accelerate geo-distributed data analytics and save WAN traffic cost. Implemented under Alluxio, an in-memory data cache platform, to enable TRE when sending data across different data centers.

Facebook, Research Collaborator

November 2019–May 2020

- *Network telemetry*: Analyzed Facebook's network telemetry system, and identified its evolving nature and necessity of handling changes. Proposed layering design along the data collection pipeline to tolerate changes. Incorporated cross-layer dependency in monitoring system to help troubleshooting (PCAT [3]).

SenseTime, Software Engineering Intern

March 2018–May 2018

- Worked on Ceph setup, testing, maintenance, monitoring, and alerting.

Peking University, Research Assistant

April 2016–July 2018

- *Network telemetry*: Designed and implemented innovative probabilistic data structures (e.g., data sketches and Bloom filters) to improve the accuracy and performance of network telemetry (Elastic Sketch [4], Cold Filter [5]).

PUBLICATIONS

Total **744** citations till October 2024 based on Google Scholar.

Conference Publications

- [1] **Yang Zhou**, Zezhou Wang, Sowmya Dharanipragada, and Minlan Yu.
“[Electrode: Accelerating Distributed Protocols with eBPF](#)”,
USENIX NSDI 2023.

MENTORING EXPERIENCE

-
- | | |
|---|-------------|
| 1. Zezhou Wang, Peking University undergraduate → University of Washington PhD Accelerating Paxos using eBPF (NSDI 2023, [1]). | <i>2022</i> |
| 2. Matt Kiley, Harvard College undergraduate Accelerating distributed transactions using eBPF and AF_XDP-based RPC systems. | <i>2023</i> |
| 3. Xingyu Xiang, Peking University undergraduate Accelerating distributed transactions using eBPF. | <i>2023</i> |

4. Yunxi Shen, Tsinghua University undergraduate
Resource-efficient job scheduling in data centers.

2023

TEACHING EXPERIENCE

- **Teaching Assistant.** CS145 Networking at Scale, Prof. Minlan Yu, Harvard University *Spring 2021*
- **Teaching Assistant.** Algorithm Design and Analysis, Prof. Tong Yang, Peking University *Fall 2018*

PATENTS

- **Yang Zhou,** Hassan Wassel, Minlan Yu, Hank Levy, David Culler, and Amin Vahdat. “Fault Tolerant Disaggregated Memory”. Pending (US20230185666A1), filed by Google in December 2022.

ACADEMIC HONORS

- Google Ph.D. Fellowship in Systems and Networking *2022*
- Finalist, Meta Ph.D. Fellowship in Networking *2022*
- Graduate Fellowship, Harvard University *2018*
- Excellent Bachelor Thesis (10/327), School of EECS, Peking University *2018*
- New Academic Star Award (1/193), School of EECS, Peking University *2018*
- Exceptional Award for Academic Innovation (2/193), Peking University *2017*
- Arawana Scholarship (2/193), Peking University *2017*
- Merit Student Award, Peking University *2017*
- Pinyou Hudong Scholarship, School of EECS, Peking University *2016*
- May Fourth Scholarship, Peking University *2015*
- Academic Progress Award, Peking University *2015*

PROFESSIONAL ACTIVITIES

- Technical Program Committee Member: *ACM SIGCOMM Poster/Demo 2023, IEEE INFOCOM Workshop on Networking Algorithms 2020.*
- Reviewer (Conferences): *ACM SIGKDD 2023, IEEE INFOCOM Workshop 2020.*
- Reviewer (Journals): *ACM Transactions on Modeling and Performance Evaluation of Computing Systems, IEEE/ACM Transactions on Networking, IEEE Journal on Selected Areas in Communications, IEEE Communications Letters, IEEE Transactions on Network and Service Management, IEEE Transactions on Vehicular Technology, IEEE Systems Journal, IEEE Transactions on Services Computing, IEEE Journal of Biomedical and Health Informatics, Springer Multimedia Systems, KSII Transactions on Internet and Information Systems, Elsevier Computer Networks.*

CURRENT STATUS

U.S. Permanent Resident, Citizen of China
