150 Western Ave, SEC 4.429, Allston, MA 02134, USA

RESEARCH INTERESTS

Networked systems, operating systems, distributed systems, networking stacks, and network telemetry.

EDUCATION

Harvard University, Cambridge, MA, USA

Ph.D. in Computer Science

(Expected) June 2024

M.S. in Computer Science

November 2021

Thesis title: Codesigning Networking Stacks and Datacenter Applications for High Efficiency and Evolvability

Advisors: Minlan Yu and James Mickens

Peking University, Beijing, China

B.S. in Computer Science

July 2018

Thesis title: Towards Faster and More Accurate Data Stream Processing

Advisors: Tong Yang

WORK EXPERIENCE

Harvard University, Research Assistant

August 2018–Present

- *Extensible kernels*: Designed kernel offloads via eBPF for distributed system protocols including Paxos (Electrode [1]) and serializable transactions (DINT [12]). Implemented and evaluated offloads atop unmodified Linux OSes, and achieved kernel-bypass-like throughput and latency.
- *μ s-scale RPCs*: Designed an efficient inter-server load balancing scheme for μ s-scale RPCs to achieve low tail latency and high goodput (Mew [11]). Implemented and evaluated for both kernel-bypass and kernel-based networking stacks.
- *SmartNIC architecture*: Designed and prototyped SGX-like TEEs (Trusted Execution Environments) for network functions in SmartNICs under multi-tenant cloud environments (S-NIC [13]).

Google NetInfra Group and System Research Group, Student Researcher

June 2021–May 2023

- *Far memory*: Designed an efficient far memory system that leverages erasure-coding, remote memory compaction, one-sided RMAs, and offloadable parity calculations to achieve fast, storage-efficient fault tolerance (Carbink [2]). Implemented and evaluated using production networking stack.
- *Distributed runtime*: Designed an efficient fault-tolerant distributed runtime based on tasks and actors (similar to Ray) by leveraging the Chandy–Lamport consistent checkpointing algorithm and causal logging mechanism.
- *μ s-scale RPCs*: Identified and motivated the inter-server scheduling problem for μ s-scale RPCs (leading to Mew).

VMware Research, Research Intern

July 2020–September 2020

- *Geo-distributed data analytics*: Applied traffic redundancy elimination (TRE) technique to accelerate geo-distributed data analytics and save WAN traffic cost. Implemented atop Alluxio, an in-memory data cache system, to enable TRE when sending data across different data centers.

Facebook, Research Collaborator

November 2019–May 2020

- *Network telemetry*: Analyzed Facebook’s network telemetry system, and identified its evolving nature and necessity of handling changes. Proposed layering design along the data collection pipeline to tolerate changes. Leveraged cross-layer dependency in the monitoring system to help troubleshooting (PCAT [3]).

SenseTime, Software Engineering Intern

March 2018–May 2018

- *Distributed storage*: Worked on Ceph storage setup, testing, maintenance, monitoring, and alerting.

Peking University, Research Assistant

April 2016–July 2018

- *Network telemetry*: Designed and implemented novel probabilistic data structures (e.g., sketches and Bloom filters) to improve the accuracy and performance of network telemetry (Elastic Sketch [5], Cold Filter [4]).

PUBLICATIONS

Total 769 citations till November 2024 based on Google Scholar.

TALKS

-
- Electrode: Accelerating Distributed Protocols with eBPF
Duke University, ACE Center for Evolvable Computing, Google, USENIX NSDI
Columbia University
April 2023
March 2023
 - Carbink: Fault-Tolerant Far Memory
Cornell University
WORDS workshop
Microsoft Research Redmond, USENIX OSDI
Google
November 2023
November 2022
July 2022
March & June 2022
 - Evolvable Network Telemetry at Facebook
USENIX NSDI
Boston University, Meta
April 2022
March 2022
 - Cold Filter: A Meta-Framework for Faster and More Accurate Stream Processing
Harvard University
October 2018

MENTORING EXPERIENCE

-
- Matt Kiley, Harvard College undergraduate
Accelerating distributed transactions using eBPF and AF_XDP-based RPC systems. 2023
 - Yunxi Shen, Tsinghua University undergraduate
Resource-efficient job scheduling in data centers. 2023
 - Xingyu Xiang, Peking University undergraduate
Accelerating distributed transactions using eBPF. 2023
 - Zezhou Wang, Peking University undergraduate → University of Washington PhD
Accelerating Paxos using eBPF (NSDI 2023, [\[1\]](#)). 2022

TEACHING EXPERIENCE

-
- **Guest Lecture** on far memory, CS294-252: Architectures and Systems for Warehouse-Scale Computers, UC Berkeley
Nov 2023

- **Teaching Assistant** for Prof. Minlan Yu, CS145: Networking at Scale, Harvard University *Spring 2021*
- **Teaching Assistant** for Prof. Tong Yang, Algorithm Design and Analysis, Peking University *Fall 2018*

PATENTS

- **Yang Zhou**, Hassan Wassel, Minlan Yu, Hank Levy, David Culler, and Amin Vahdat. “Fault Tolerant Disaggregated Memory”. Pending (US20230185666A1), filed by Google in December 2022.

ACADEMIC HONORS

- Google Ph.D. Fellowship in Systems and Networking *2022*
- Finalist, Meta Ph.D. Fellowship in Networking *2022*
- Graduate Fellowship, Harvard University *2018*
- Excellent Bachelor Thesis (10/327), School of EECS, Peking University *2018*
- New Academic Star Award (1/193), School of EECS, Peking University *2018*
- Arawana Scholarship (2/193), Peking University *2017*
- Pinyou Hudong Scholarship, School of EECS, Peking University *2016*
- May Fourth Scholarship, Peking University *2015*

PROFESSIONAL ACTIVITIES

- PC Member: ACM SIGCOMM Poster/Demo 2023, IEEE INFOCOM Workshop on Networking Algorithms 2020.
- Reviewer (Conferences): ACM SIGKDD 2023.
- Reviewer (Journals): ACM Transactions on Modeling and Performance Evaluation of Computing Systems, IEEE/ACM Transactions on Networking, IEEE Journal on Selected Areas in Communications.
- Panelist: “Getting started with systems research” at Students@Systems 2022.
